

# The Statistical Significance of Neuresthetics.

This entire theory hinges on the fact that as our brains form our thinking, so does our thinking form our brains. We focus on the latter in terms of what behaviors create macro brain architecture typical of genius minds. This is why Ambidexterity and Pantheism are combined. The purpose of this paper is to explain exactly why, and provide a realistic expectation from societal adoption of it.

Tesla, DaVinci, and Einstein were all both. And by both, I mean ambidextrous and pantheist.

This is only three people, and there are plenty of very intelligent scientists through history.

If it was possible to objectively list all genius in the order of 'how much they rocked the world,' people would maybe know a few to perhaps a dozen names. Let us say for the purpose of analysis that the top 25 scientists on this list are household names. Of course, this is more than most know by name for their contributions, but we want to give the benefit of the doubt and undersell Neuresthetics for a reasonable expectation.

Ambidexterity is 1/100.

Pantheistic understanding in the deep sense is maybe 1/100.

Their appearance in people together independently of genius is theoretically 1/10,000.

A list of the top 25 geni would be lucky to have 1 with both if there was no connection.

If an entire 3/25 scientists have both and none of the others had even one, it would still be 12% of top geni compared to the 0.01% probability that anyone on the list would have both. That is a ratio of 1:1200.

And this is true, except that there is also a clustering of geni around both Pantheism and Ambidexterity by themselves independent of each other, where the overlap between them has a particular effect in producing radically higher I.Q., why?

Because the structurally and metabolically central part of the brain which handles Entity, the Posterior Cingulate Cortex, if empowered by rational theology, which in turns empowers the rest of the brain to itself.

The PCC is then separated across the Corpus Callosum, which is bulked by ambidextrous exercises.

The combination alleviates the central chokepoints between hemispheres.

Two cities separated by a river is an apt analogy. Bridges are good business.

There are of course many other factors to whether someone lands on genius. They can be added together with this. More can and all should be included in the method. This initial combo is only to address the nature of the method in terms of flipping neuropsychology on its head.

## CAVEATS

The bread-and-butter training for ambidexterity is handwriting with both hands because it employs a great number of networks across hemispheres from abstraction to visual recognition. However, in the same way cursive went out of style with the advent of the keyboard, most people do not have to physically write anything to get the job done because we have become so reliant on cell phones. While a phone keyboard does not require the same level of dexterity a pencil does, it is very commonly done with hands in concert and so this may lead to more symmetrical handedness. This exchange could also lead to worse fine and/or abstract dexterity with both hands. Key to note, ambidexterity is not in itself the point. The point is exercising the Corpus Callosum. For example, some “authorities” later claimed that Einstein was right-handed, however, his physical brain still shows the CC mass of someone intensely ambidextrous.

The entry into pantheistic type thinking or anything related to the base class process is a little less clear. Take DaVinci for example, who was in that area before the term was invented. It is a zone of belief. Heisenberg said, “The first gulp from the glass of natural sciences will turn you into an atheist, but at the bottom of the glass God is waiting for you.” Those atheists are often remarkably close to Pantheism aside from the arrangement of definitions in the way a lawyer would approach. Some other of them are still as hopelessly entrenched in faith as they were before they became atheist, as atheism requires the same faith theism does. Many Atheists will admit they believe in a higher power of some kind. Some people turn to nature worship. What is more important than *being* “pantheist” is “not believing in what is obviously bullshit.”
